

As a Amateur Radio Operator, I would like to simply voice my opposition to any allowance of "Broadband Over Power lines" or BPL. It has been proven that BPL will cause interference to radio operations which would be so great that amateur radio would be unusable all together. While this would not only destroy my hobby, it would also make it impossible for radio amateurs to provide communications during times of emergencies like was done after September 11, 2001, Hurricane Andrew, many forest fires, floods, Etc. Amateur radio operators in the U.S. provide countless hours of volunteer time each year to worthy causes, as well as enjoy a hobby which is NON-THREATNING to anyone else. Please consider this when making your ruling.

Thank You for your obviously valuable time,  
Glen Powel - K9GP
